TO WHOMEVER IT MAY CONCERN

This is to confirm that we are Technical Contractors for GLOBACOM Nigeria maintaining over 650 GSM Sites each consuming 70 litres of Diesel per day since 2010.

In 2011, after tests on some of our sites with Fuel Stick Fuel Conditioner introduced by Fuel Stick Nig Limited, we started using the product on all our sites.

Not only we found that our daily consumption went down by 16 litres per day per site to 54 litres per day, we also observed that our maintenance cost as far as Injectors and Injector pumps went down drastically. The exhaust emissions too went down drastically.

We have since been using the product and we notice that the product has been continuously improved offering even increased reductions and reduced emissions as well as smoothness of the engine.

We have therefore no hesitation in recommending the use of the product for use on *any internal combustion engines.*

Best regards

Dr Joachim Daudu
